

THE SEVERE SEPSIS CASCADE

While the exact cause of sepsis is unknown, increasing evidence suggests that it is associated with widespread inflammation, coagulation, and suppression of fibrinolysis (the body's clot-busting system) – thought to occur when chemical signals in the immune system go awry.

Xigris™ is indicated for the reduction of mortality in adult patients with severe sepsis (sepsis associated with acute organ dysfunction) who have a high risk of death (e.g., as determined by APACHE II). See important safety information on Xigris™ included in this kit or on www.aboutXigris.com. Complete prescribing information for Xigris™ is enclosed in this kit.
