

Program Description

The Visiting Scientist Program is a one-year, post-graduate program that introduces participants to various medical, marketing, and regulatory aspects of the pharmaceutical industry. It is designed to train professionals for a career in the pharmaceutical industry by allowing them “hands-on” experience with the drug development process. The Visiting Scientist is assigned to one department yet has continuous contact with other functional areas.

Visiting Scientist Program

Regular meetings as a group with the Program Coordinator and with an assigned individual mentor ensure broad exposure and understanding of the entire drug development process.

Industry and Eli Lilly and Company

The pharmaceutical industry offers endless opportunities for growth and advancement to motivated individuals seeking a challenging and rewarding career.

Eli Lilly and Company is a global, research-based pharmaceutical corporation employing approximately 43,000 people worldwide. Lilly's products are marketed in 143 countries and include the core therapeutic areas of neuroscience, endocrine disorders, cancer, and

cardiovascular diseases. Lilly's headquarters are located in Indianapolis, Indiana. Additionally, Lilly has regional and affiliate offices worldwide. To find out more about Eli Lilly and Company, visit us at www.lilly.com.

Indianapolis

Indianapolis is a growing metropolitan city in the heart of the Midwest—rich in arts and culture, history and heritage, time-honored traditions and endless possibilities. The nation's 12th largest city has gone through a dramatic revitalization and stunning renaissance period that makes it a different place than it was only 10 years ago. Indianapolis is the perfect balance of big-city style and genuine Hoosier hospitality that makes it a growing destination for corporate meetings, international events, and leisure travel. We could go on and on, but we would rather let you experience it for yourself.
